How to refresh a page with jQuery

Answer: Use the JavaScript location.reload() Method

You can simply use the JavaScript `location.reload()` method to refresh or reloads the page. This method optionally accepts a Boolean parameter `true` or `false`.

If the parameter `true` is specified, it causes the page to always be reloaded from the server. But, if it is `false` (which is default) or not specified, the browser may reload the page from its cache.

Let's check out an example to understand how this method basically works:

Example

Try this code »

- `<!DOCTYPE html>`
- `<html lang="en">`
- `<head>`
- `<meta charset="utf-8">`
- `<title>Reload the Page Using jQuery</title>`

- ```
  <script
  src="https://code.jquery.com/jquery-1.12.4.min.js"></script
  >
  ```
- `<script>`
- `$(document).ready(function(){`
- `$("button").click(function(){`
- `location.reload(true);`
- `});`
- `});`
- `</script>`
- `</head>`
- `<body>`
- `<button type="button">Reload page</button>`
- `</body>`
- `</html>`

You can also do the same thing with plain JavaScript. You don't need jQuery for this. Check out the following example which is the modified version of the previous example.

Example

Try this code »

- `<!DOCTYPE html>`
- `<html lang="en">`
- `<head>`
- `<meta charset="utf-8">`
- `<title>Refresh the Page with JavaScript</title>`

```html
<script>
    function reloadPage(){
        location.reload(true);
    }
</script>
</head>
<body>
    <button type="button" onclick="reloadPage();">Reload page</button>
</body>
</html>
```
